Subject: Proposed Yucca Mt. Dump Site

LSN: Relevant - Not Privileged
User Filed as: Excl/AdminMgmt-14-4/QA:N/A

To whom it may concern,

(While the Yucca mountain area may have a very low population density, placing radioactive waste anywhere near a major fault line is a major concern. Furthermore, should Yucca Mountain ever become an active volcano again, I am concerned that proper removal may be difficult if not impossible before catastrophe would happen.

There are many concerned citizens about this issue, and they have voiced many valid concerns which I agree with. The bottom line is, radioactive waste needs to be placed in a geographically stable area. Anything other than that *will* bring trouble, it is only a amount of time before an earthquake disturbs the waste. I do not need to remind you have the long half life of the radioactive material your keeping. }

Thank you,
Quentin A. Schmieding
